

SOFTWARE DEVELOPER

Entry Level Software Developers are responsible for the development and continuous improvement of iSurity's cutting-edge software applications, in a lean development environment, using the latest tools and technologies:

C# | Entity Framework 6 | MS SQL Server | ASP MVC 6 | Knockout JS | Kendo UI

Responsibilities:

- Maintain and enhance the company's suite of in-house line of business software applications.
- Develop new software applications to support business objectives and growth.
- Provide application support and develop bug fixes.
- Develop data reporting solutions in collaboration with other departments to meet regulatory requirements.
- Assist management in the decision-making process and provide insights into trends by creating reports and dashboards using SSRS and the company's data warehouse. Integrate and manipulate data from various EDI feeds using SSIS.
- Participate in the decision-making process regarding technology initiatives and strategy.
- Provide technical support to internal users.
- Assist with software upgrades and other infrastructure changes as needed.
- A strong passion for technology and software development.
- Software development experience as part of a software development team, as a contributor to an open source project or other personal and academic projects.
- The willingness and ability to learn.
- The ability to work independently and see a project through from requirement gathering to implementation.
- Excellent time-management and self-management skills.
- The ability to manage own time and commitments, stress, work style and self-development.
- The ability to effectively communicate with a variety of audiences.
- Initiative, confidence, drive & ambition.
